

Model Version Comparison V1-V4

Comparison of saved model artifacts and the latest XGBoost V4 pipeline.

version	model	feature_count	threshold	accuracy	precision	recall	f1	auc	cost_thb	performance_rating
V1	XGBoost	136	0.5000	0.7080	0.4968	0.2680	0.3482	0.6882	35,900	D
V2	XGBoost	38	0.5000	0.6787	0.4628	0.6560	0.5427	0.7366	19,550	B
V3	Stacking (XGB+LGB+CAT)		0.5000	0.6667	0.4484	0.6376	0.5265	0.7190	20,400	B
V4	XGBoost	120	0.3300	0.6540	0.4331	0.6117	0.5071	0.6827	28,600	B

Recommendation

V1 has the highest Accuracy, but V2 is the best practical return-risk candidate because it has lower Cost, higher F1, higher AUC, and stronger Recall. V4 is the most auditable pipeline because it starts from `clean_dataset_v4` and exports selected train features.
